

Youth Flow

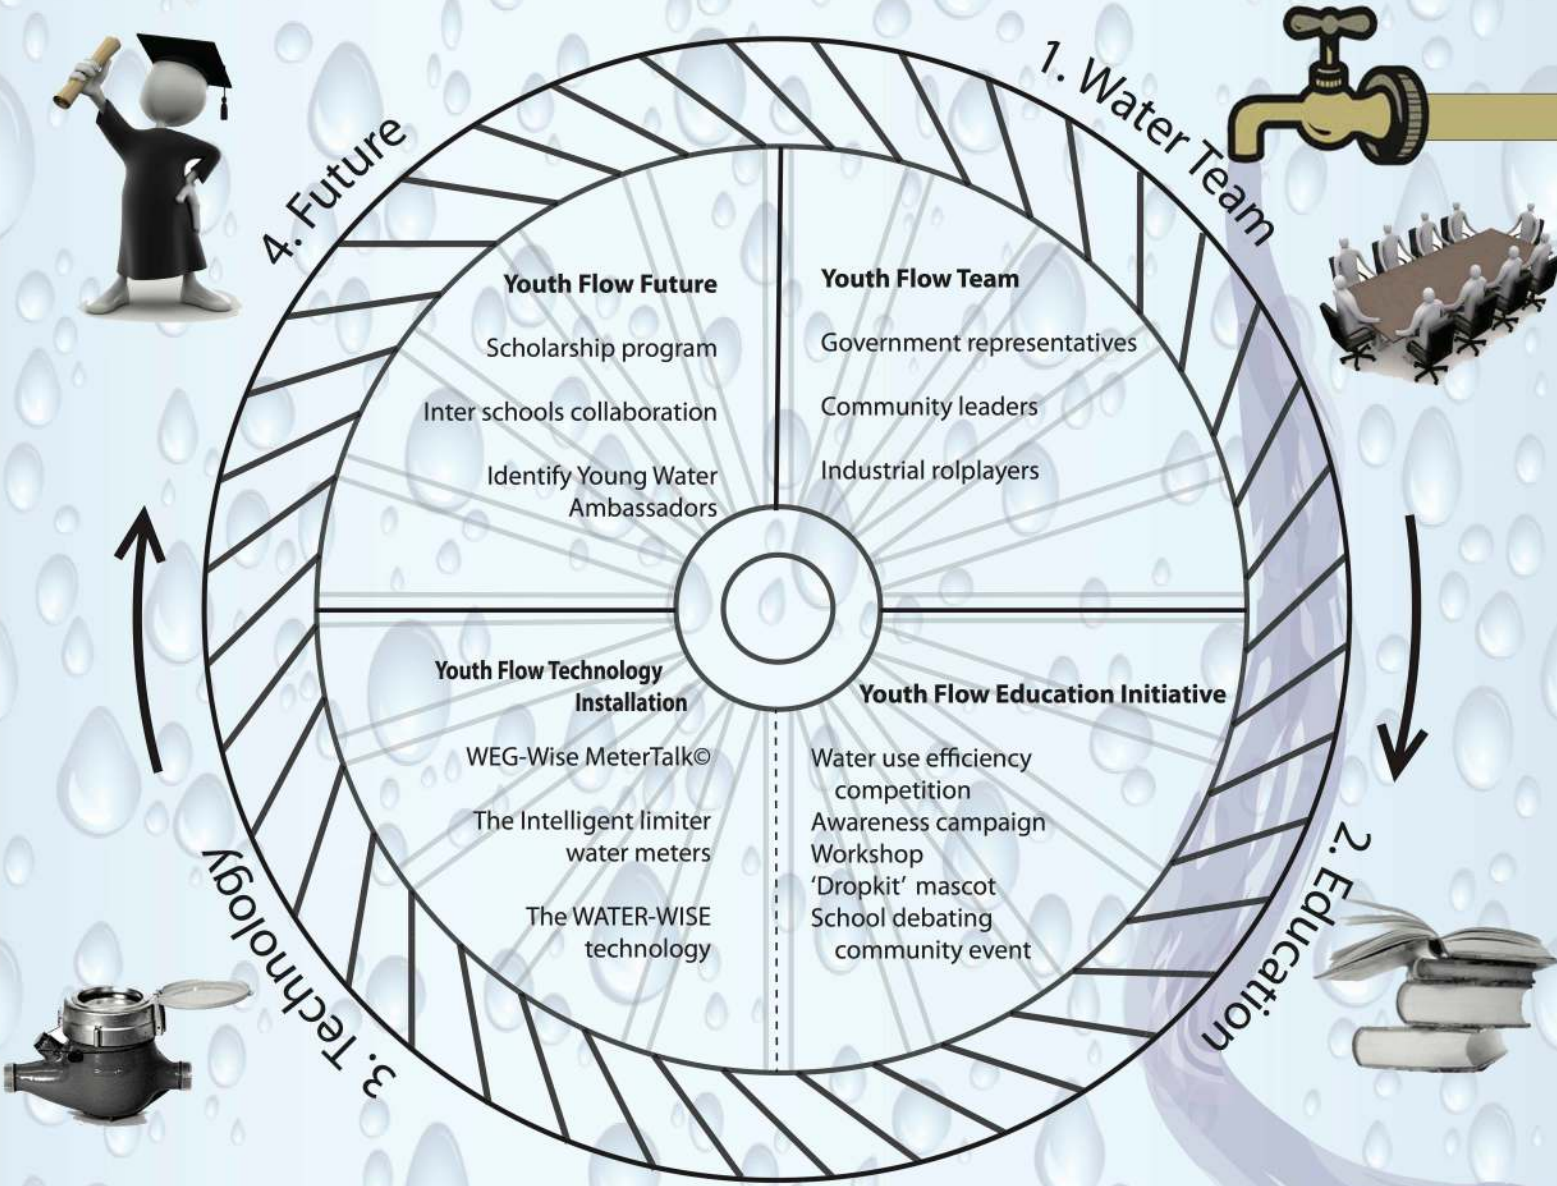

Raising the future

Nina Swiegelaar, Meisie Tleane, Sacha Handgraaf & Louise Klängen

Problem

Large volumes of water spilling and inefficient water management are a big concern in terms of water conservation. This gives rise to the development of innovative technology solutions. Companies like "WEG-Wise" brought the MeterTalk© and WATER WISE Technologies to areas like uMgungundlovu District Municipality in Kwa-Zulu Natal. These technologies are an extremely effective tool in the fight against water loss. However, if the technology is misunderstood, it will be feared rather than embraced.

Conclusion

Youth Flow Initiative is a holistic approach to install MeterTalk© and WATER-WISE technologies. In order to support it with an educational system to socially empower the consumer to overcome barriers, ensuring technological success. Youth Flow aims to build a bridge between technology and active citizenship.
