

Wetskills Water Challenges

Introduction and track record

An innovative approach to real-life learning and networking

The Wetskills Water Challenge is a two-weeks pressure-cooker programme for students and young professionals with a passion for water from all over the world. They meet in a country and work in transdisciplinary and transcultural teams at water-related topics.

The main challenge: As a team develop your own innovative and out-of-the-box solution for water challenges in a changing world.

The study cases are provided and formed by study case owners, companies and organisation with a dedicated challenge in a local situation. These concepts are presented during the formal event through an ice-breaking and energizing session, when the cooperation between the Dutch water sector and the partner-country is showed and positioned. It provides a floor to integrate generations, water challenges, disciplines and cultures.

Wetskills focus at real-life challenges, strongly linked to the sector. The so-called case owners are smaller and larger companies, governments, knowledge institutes and NGOs or a consortium of more than one organisation from the water sector of The Netherlands and/or partner-country. The organisation formulates the study case for one of the Wetskills teams. The study cases describe a water-related challenge, based on the regional challenges of the country where the Wetskills is held. The team is challenged to find an out-of-the-box and applicable solution for the case owner and present it at the formal water-related event.

In short

- + Transdisciplinary and transcultural cooperation in practice
- + Integration of students and Young Water Professionals
- + Real-life challenges provided and supported by the sector partners
- + Informal and energizing ice-breaker during a larger formal event
- + Positive PR for the organising partners and involved organisations
- + Link between universities and working field
- + Follow-up activities and business (under the name WetsNext)
- + Proven concept in more than ten different countries worldwide
